

Ai-driven Project Management for Developers

Implementing AI-driven project management effectively

- 1 Set up auto-labeling in Linear or Jira using GPT-4 integrations today.
 - 2 Sync your GitHub and Slack fully for complete team activity visibility.
 - 3 Choose a dev-oriented AI PM tool like Linear AI or Jira AI.
 - 4 Connect your PM tool to multiple sources: GitHub, Slack, Figma, test suite.
 - 5 Feed AI tools your repos, PRs, and historical velocity data consistently.
 - 6 Enable AI blocker prediction and automated ticket routing in your workflow.
 - 7 Train your team to work with AI automation, not against it.
 - 8 Monitor AI-generated insights for dependency risks and workload estimates weekly.
 - 9 Automate code reviewer assignment using your chosen AI PM platform.
 - 10 Review and act on AI suggestions for task prioritization and reassignment.
 - 11 Track metrics: triage time, deploy frequency, sprint overrun rate monthly.
 - 12 Integrate AI PM tool into daily standup for proactive blocker surfacing.
-
