

Scaling Ai Pkm Systems for Large Organizations

Implementing AI knowledge management at scale

- 1 Map every data source across your organization before evaluating vendors.
 - 2 Audit current data sprawl across Slack, SharePoint, Jira, and databases.
 - 3 Implement role-based access controls down to paragraph-level permissions.
 - 4 Set up audit trails and access analytics using Box Shield or Purview.
 - 5 Run realistic load tests with 2,000+ simultaneous users before deployment.
 - 6 Negotiate bulk AI API pricing directly with Anthropic or Google.
 - 7 Budget twice as much for training and workflow integration as software.
 - 8 Embed AI suggestions into daily tools like Outlook and Teams.
 - 9 Define 2-3 ROI metrics and baseline them before system launch.
 - 10 Track time-to-answer, duplicate work reduction, and onboarding speed gains.
 - 11 Plan for 4-6 months of data integration work before go-live.
 - 12 Conduct change management training for 80% of adoption success.
-
