

How Ai Replaces a Small Team

Replacing your team with AI tools

- 1 Audit your current team's tasks and identify repetitive admin work suitable for automation.
- 2 Set up Motion or similar tool with rule-based triggers for scheduling, invoicing, and email replies.
- 3 Replace freelance writers with Jasper or Copy.ai, then edit AI drafts for publish-ready content.
- 4 Deploy Intercom Fin AI or Zendesk AI and tune FAQs before launching customer support bots.
- 5 Switch design work to Canva Pro and Midjourney instead of hiring freelance designers.
- 6 Implement Polymer Search or Google Looker Studio to auto-generate daily dashboards and alerts.
- 7 Batch similar tasks together so AI tools handle grunt work while you focus on strategy.
- 8 Create templates for recurring projects so AI can standardize output across your business.
- 9 Monitor AI tool performance weekly and adjust prompts based on output quality.
- 10 Maintain final decision-making authority—don't become a prompt monkey without strategic oversight.

11 Calculate monthly savings from AI tool stack versus previous team costs to justify investment.

12 Test multiple AI tools on small tasks before full-scale implementation across your business.
